1. Introduction

The intent of this report is to promote data sharing and cost sharing between FEMA, the U.S. Geological Survey (USGS), the National Geospatial-Intelligence Agency (NGA), the U.S. Census Bureau, and others. The report provides a nationally oriented list of existing elevation and orthoimagery data sets identified for use in FEMA projects which provides FEMA's data partners a valuable reference when planning data production activities. Additionally, the report provides detail by fiscal year on the list of counties where FEMA has projects planned and where additional data sharing opportunities may exist which are near the set of urban areas that have been designated by NGA for high-resolution orthophoto and LIDAR production. The data collection schedule, or sequencing, is revised and published annually under FEMA's Map Modernization program, in the Multi-Year Flood Hazard Implementation Plan (MHIP). Project sequencing data from FEMA's Multi-year Flood Hazard Identification Plan (MHIP) Version 2.5, published April 2007, are used in this report. The full report can be viewed at http://www.fema.gov/plan/prevent/fhm/dl_mhip.shtm.

Data collection by FEMA is done during the data development phase of flood restudies, which are done on a county-by-county basis. Terrain or basemap production will generally occur during the initial year of funding, immediately following the initial scoping meeting.

Data collection by NGA consists of high resolution orthoimagery and LIDAR of select major urban areas in the U.S.

- 1 foot resolution natural color orthophotography has been collected as listed at <http://seamless.usgs.gov/website/seamless/products/listofortho.asp>. This data meets FEMA's accuracy specifications and is available via USGS from the Seamless Data Distribution System (<http://seamless.usgs.gov/>) and Earth Explorer (<http://earthexplorer.usgs.gov/>).
- NGA will make LIDAR data available to FEMA and FEMA contractors working on flood studies. However, the data can be used for flood studies only and not distributed to anyone else or used for other purposes. These data meet FEMA's terrain mapping requirements for all risk classes, but some processing is required to ensure proper bare earth model for flood studies. There is not consistent funding, so the schedule of future collections is unpredictable.

The following tables and maps described below are found in this Appendix, in the order shown:

- Projects with Elevation Data by FEMA Region table lists existing FEMA projects with known elevation data sets in each FEMA Region. This table should be used by mapping partners whose data requirements are nationally oriented. (Sec. 2.1)

FEMA Data Collection in U.S. Urban Areas

-  Projects with Elevation Data by FEMA Region map graphically reflects the data from the Elevation Projects by FEMA Region table.
- Projects with Imagery Data by FEMA Region table lists existing FEMA projects with known imagery data sets in each FEMA Region. This table should be used by mapping partners whose data requirements are nationally oriented. (Sec. 2.2)
 -  Projects with Imagery Data by FEMA Region map graphically reflects the data from the Imagery Projects by FEMA Region table.
- Map Mod Elevation Data Identified in Urban Area table lists elevation data sets that FEMA has identified for use in its projects that intersect the NGA Urban Area LiDAR collection project extents. (Sec. 3.1)
 -  Map Mod Elevation Data Identified in Urban Areas map shows the intersection of the Urban Areas and FEMA projects with known elevation data sets.
- Map Mod Imagery Data Identified in Urban Areas table lists imagery data sets that FEMA has identified for use in its projects that intersect the NGA Urban Area orthophoto collection project extents. (Sec. 3.2)
 -  Map Mod Imagery Data Identified in Urban Areas map shows the intersection of the Urban Areas and FEMA projects with known imagery data sets.
- NGA Urban Areas Initiative LiDAR Collection in FEMA Regions table shows where the NGA has collected or plans to collect LiDAR data in Urban Areas and other areas of interest. (Sec. 3.3)
 -  NGA Urban Areas LiDAR Collection map shows the extents of LiDAR collection projects in each Urban Area.
- NGA Urban Areas Initiative Imagery Collection in FEMA Regions table shows where the NGA has collected or has plans to collect high-resolution imagery data in Urban Areas and other areas of interest. (Sec. 3.4)
 -  NGA Urban Areas Initiative High Resolution Imagery Collection in FEMA Regions map shows the extents of imagery collection projects in each Urban Area.
- Planned FEMA Data Coordination by Urban Area table shows where FEMA has planned projects in FY07 and FY08 that intersect the NGA Urban Areas. (Sec. 3.5)
 -  Planned FEMA Data Coordination by Urban Area map shows the counties in each Urban Area where FEMA has planned projects in FY07 and FY08.

2. FEMA Data Coordination: Known Imagery and Terrain Data Sets

FEMA flood map update projects generally take several years to complete. Framework data discovery and/or production generally takes place at the beginning of the project, but it may be some months before the data sets are loaded onto the Mapping Information Platform (MIP) and available for public search and download. Imagery and elevation data sets that have been captured and processed that are being managed by the MIP are now listed in Appendix C, “Elevation and Imagery Data Available from FEMA”. These data sets are no longer listed in the tables below.

The following tables represent imagery and elevation data that has been identified for projects in each region, but has not yet been loaded and published on the MIP. These tables provide FEMA and its partners the opportunity to share and coordinate base map and terrain data collection for in-work and planned FEMA projects in the U.S. and its territories. Additional metadata for many of these data sets can be found in the National Digital Elevation Program (NDEP) and National Digital Orthophoto Program (NDOP) project tracking systems. These systems can be accessed at <http://hazards.fema.gov/metadata/NDEP/> and <http://hazards.fema.gov/metadata/NDOP/> respectively.

Since the Fall 2007 report was published, more complete information on Fiscal Year 2007 scheduled projects has become available, and to a limited extent, the addition of Fiscal Year 2008 projects has occurred resulting in increased imagery and terrain data discovery. These additional data sets have been added to the listings below.
